OE Fit, Form and Function

YOUR FIRST CHOICE IN QUALITY PRODUCTS

About Us

Walker Products began supplying the fuel system needs of the automotive industry in 1946. Today Walker is one of the largest privately owned manufacturers of fuel system components and engine management devices.

We serve major Original Equipment Manufacturers, Co-manufacturers, Rebuilders, and Retail customers in the fuel, engine management and exhaust markets worldwide.

Walker Products' offerings include Carburetor and Fuel Injection repair kits, Oxygen sensors, Exhaust Gas Temperature sensors and other engine management products such as Cam & Crank position sensors, Knock sensors, Throttle Position sensors, Mass Air Flow sensors, Manifold Absolute Pressure sensors, Engine Coolant Temperature sensors, Fuel Injectors, Fuel Pressure Regulators and much more.

We are committed to supplying products manufactured to meet or exceed OEM standards and specifications. This effort is backed by our own manufacturing, product management and engineering staff to ensure it is maintained and accurate in the production of quality parts, vehicle applications, instruction sheets and technical support.

Our catalogs have been carefully compiled & checked with vehicle manufacturer's parts information. These catalogs are issued for your convenience, as an aid to sales. No responsibility can be assumed should some reference prove to be inaccurate. All manufacturer's names, numbers, symbols & descriptions are used for reference only. It is also not implied that any part listed is the direct product of the O. E. M. manufacturer.

YOUR FIRST CHOICE IN QUALITY PRODUCTS

Catalog Guide

HOW TO USE THIS CATALOG

The Walker Oxygen Sensor Catalog contains six reference sections including:

PROGRAM GUIDE:

The Program Guide contains a complete direct fit part number listing and information relevant to the design of that part. The universal cross-reference is also part of this guide.

BUYER'S GUIDE:

The Universal and Direct Fit Buyer's Guide contains oxygen sensor technical line drawings that include the length of the sensor in inches and millimeters.

APPLICATION GUIDE:

The Application Guide is consolidated by make, model year, engine size, etc. Specific vehicle information is required including engine type and location of the oxygen sensor. The illustrations below should assist with terms, determining engine type and typical locations related to common engine mounting configurations.

V6, V8, V10 & V12 *

L4 & L6 - TRANSVERSE *

V6 & V8 - TRANSVERSE *

L4 & L6 *

*The illustrations above represent typical engine mounting configurations. There are many variations depending on make and model. The buyer should take care to choose the correct sensor for a specific application location.

Oxygen Sensors...

**IMPROVED
ENGINE
RESPONSE &
PERFORMANCE**

**LOWER
EMISSIONS**

**IMPROVED FUEL
ECONOMY**

**LONGER
SENSOR LIFE**

**MEETS OEM
SPECIFICATIONS**

Walker Oxygen Sensors are precision made for outstanding performance and manufactured to meet and exceed all original equipment specification and test requirements.

**100% OEM
QUALITY**

The oxygen sensor is a device which determines the oxygen content of the exhaust gas. Since the amount of oxygen in the exhaust gas is a very good indicator of combustion efficiency, it is also the best place to monitor the air-fuel ratio.

Located in the exhaust system, the oxygen sensor produces a voltage proportional to the amount of oxygen in the exhaust versus the air (<150mV lean & > 750mV rich). This data is used to control the air-fuel mixture through PORT or TFI injectors and carburetors. Sensors are monitored or checked anywhere from 4 to 100 times per second. The air-fuel mixture is thus always moving from rich to lean, averaging very close to stoichiometric (ideal) ratios.

The ceramic sensor body is contained in a housing which protects it against mechanical effects and facilitates mounting. The ceramic body is made of stabilized zirconium dioxide (zirconia). Its surfaces are coated with electrodes made of a gas-permeable platinum layer. In addition, a porous ceramic coating has been applied to the side exposed to the exhaust gas. This coating prevents contamination and erosion of the electrode surfaces by combustion residue and particulates in the exhaust gases.

YOUR FIRST CHOICE IN QUALITY PRODUCTS

Technical Recommendations

MALFUNCTIONING AND FAILED SENSORS

Oxygen sensors can fail when the sensor's ceramic element is exposed to certain types of silicone compounds or when an oil-burning engine leads to the sensor becoming oil-fouled. Also, a small amount of tetra-ethyl lead in the gasoline can kill an oxygen sensor. Over-the-counter fuel additives, which are not "oxygen sensor safe" can also kill an oxygen sensor.

Failures can occur either instantaneously at the time the contaminant contacts the oxygen sensor, causing a dead sensor, or gradually over a period of time. Gradual deterioration results in a "slow" sensor which does not react as quickly as it should, causing the catalytic converter to perform less efficiently. This can lead to premature failure of the catalytic converter.

"Slow" oxygen sensors can cause a drop in fuel economy of 10-15% and cause excessive exhaust emissions and poor drivability. Unfortunately, the symptoms of a "slow" oxygen sensor are not always obvious to the vehicle owner, unless the vehicle fails an emissions test, a decline in fuel economy is noticed, or drivability problems occur.

A "dead" sensor can be detected with a relatively inexpensive digital volt-ohmmeter. A "slow" sensor can only be diagnosed by using a digital oscilloscope or scope meter. Most installers will probably not be able to spot an oxygen sensor problem until it is too late, and the catalytic converter is already well on its way to failure.

PREVENTATIVE MAINTENANCE

One-wire and two-wire "unheated" type oxygen sensors should be checked or replaced every 30,000 miles. These sensors rely solely on hot exhaust gas to heat up to operating temperature, and are designed to allow a large volume of exhaust gas to make contact with the active ceramic element. These sensors are exposed to contamination, especially the "wide-slot" varieties found on Chrysler, Ford and General Motors vehicles.

"Heated" type oxygen sensors have a built-in heater which heats the sensors. Much less exhaust gas needs to contact the ceramic element, making these sensors less prone to contamination.

"Heated" type sensors can also be located further downstream (closer to the catalytic converter) which increases their life expectancy. "Heated" type oxygen sensors should be checked or replaced every 60,000 miles.

YOUR FIRST CHOICE IN QUALITY PRODUCTS

What is the Life Expectancy of an Oxygen Sensor?

The life expectancy of an oxygen sensor is approximately 30,000 miles for unheated sensors and 60,000 miles for heated sensors. Even under normal operating conditions, oxygen sensors must endure a constant barrage of harmful exhaust gases, extreme heat and high velocity particulates. Longevity of oxygen sensors in older vehicles may be reduced due to worn piston rings and valves.

Sometimes oxygen sensors can become contaminated by coolant, oil or silicone particulates. Oxygen sensors exposed to these contaminants will not operate as designed. Although sensors in some applications can remain serviceable up to 90,000 miles, the effectiveness of oxygen sensors will inevitably decrease over time.

At Walker Products, we recognize the need to keep vehicles running clean. A bad oxygen sensor can cause unacceptable emissions levels, affect performance and ultimately damage the catalytic converter. Make it a point to check oxygen sensors at each tune-up and replace faulty sensors with a new Walker oxygen sensor.

FOR THE END USER AND REPAIR SHOPS PERFORMING A VEHICLE TUNE-UP, REMOVE THE OXYGEN SENSOR AND CHECK FOR THESE SYMPTOMS:

Lead Poisoning

Ethylene Glycol
(Antifreeze)
Contamination

Rich Fuel Mixture

Silicone Poisoning

REPLACE FOR BETTER PERFORMANCE AND A CLEANER ENVIRONMENT

YOUR FIRST CHOICE IN QUALITY PRODUCTS

Diagnostic Trouble Codes

DTC CODES

When oxygen sensor failure occurs, a DTC (Diagnostic Trouble Code) is recorded in the ECU (Engine Control Unit) and a MIL (Malfunction Indicator Lamp) is illuminated on the dash, alerting the driver the vehicle has a problem.

To diagnose the fault, a code reader or scan tool is connected to the vehicle to read the trouble code. The scan tools can vary in the display of information shown. Some show a definition for the code, while others show only a trouble code number. There are generic or standard OBDII codes and vehicle manufacturers use additional codes called enhanced or OEM-specific codes. On many older (pre-1995) vehicles, a trouble code or DTC can be read without a scan tool or code reader by using a manual flash code procedure.

When using a list of DTC trouble codes and you have identified the description, the next step is to diagnose the fault. You must follow the diagnostic procedure to properly diagnose the system, sensor and/or circuit.

THE TROUBLE CODE BY ITSELF DOES NOT TELL YOU WHICH PART TO REPLACE.

The scan tools or code readers speak OBD II language, meaning the references to the engine are coded.

B1 = Bank 1, B2 = Bank 2. When applying OBD II to oxygen sensors, the codes would then read B1S1. This refers to Bank 1, Sensor 1.

Finding Bank 1 is not difficult. The front of the engine will have the accessory pulleys and drive belts, regardless of orientation in the engine compartment. Bank 1, containing cylinder #1, is always the most forward cylinder on the block. There will be a visible difference in the cylinder head location. Refer to the diagrams below.

Sensor 1 will be the upstream position and Sensor 2 would typically be the downstream position. In some instances, Sensor 2 can be upstream making Sensor 3 downstream.

TYPICAL ENGINE BANK IDENTIFICATION:

Date of Manufacture Notice

Installing an incorrect part may yield unexpected results such as poor performance or damage to the vehicle. Before ordering, please determine the date of manufacture of the vehicle as this may be crucial to matching the right part. The date of manufacture may be found on the door jamb sticker. Three examples are provided for illustration purposes only.

Month & Year: March, 2006

Manufacturing Data
(found on driver's side doorjamb)

Month & Year: August, 2014

Manufacturing Data
(found on driver's side doorjamb)

Month & Year: October, 2000

O2 Sensor Wrench

12 & 6 Point 2 1/8" Offset

Includes a 12 point and 6 point socket giving the technician the ultimate tool to remove O2 Sensors in confined areas.

The 12 point side enables the technician twice the number of clock angle attachment positions. This gives the technician the maximum accessibility to remove O2 Sensors in difficult areas.

The 6 point side provides the technician the maximum holding power for O2 Sensors that are corroded in place.

The new beefy design is 25% stronger.

Fits with all configurations of O2 Sensor wire/connectors.

Designed with additional offset enabling use on LTI Gen II 5.7L HO MPFI V-8 found in the 1992 and later Chevrolet Corvette, 1993 and later Camaro and 1993 and later Pontiac Firebird / Trans Am also 1989 and later Corvette ZR1 with the LT5 5.7L DOHC SFI V-8

O2 Sensor Wrench

12 & 6 Point

Includes a 12 point and 6 point socket giving the technician the ultimate tool to remove O2 Sensors in confined areas.

The 12 point side enables the technician twice the number of clock angle attachment positions. This gives the technician the maximum accessibility to remove O2 Sensors in difficult areas.

The 6 point side provides the technician the maximum holding power for O2 Sensors that are corroded in place.

The new beefy design is 25% stronger.

Fits with all configurations of O2 Sensor wire/connectors.

88-831

O2 Sensor Wrench

Shielded Applications

This unique tool has been designed to R&R shielded O2 Sensors currently found on Toyota and Lexus vehicles.

The depth and outer diameter of the socket are critical features enabling it to fit in the limited space of the heat shield.

This tool features a 12 point double hex enabling the technician twice the number of clock angle attachment positions versus a 6 point design. For maximum strength this tool is forged chromolly steel and comes in a black finish.

**O2 Sensor Bung
Thread Repair Kits**

Includes: 1 Tap, 1 Insert Tool, 6 Repair Inserts

88-835

O2 Sensor Wrench

6 Point 3/8" Drive
1.2" Overall Depth

The 6 point side provides the technician the maximum holding power for O2 Sensors that are corroded in place.

Fits with all configurations of O2 Sensor wire connectors.

88-833

**O2 Sensor
Bung Insert Kit**

Includes: 6- Repair Inserts

88-836

O2 Sensor Socket

Standard O2 Sensors
6 Point With 9/32" Wire Opening
Fits 7/8" or 22mm 3/8" Drive

88-834

O2 Sensor Wrench

Standard O2 Sensors
Fits 7/8" or 22mm 2" Overall Depth

88-837

O2 Sensor Chaser

M18x1.5 Thread Chaser 3/8" Drive
