

## Product Spotlight

### Camshaft & Crankshaft Sensors

Walker Products has launched an expanded Camshaft Position & Crankshaft Pulse sensor program to their UK and European range. Finalized at the end of last year, Walker has increased the program's SKU count by nearly 300, a substantial, triple digit percentage increase from 2018. This allows distributors and technicians to service 240% more applications on the road today. As one of the industry's highest quality engine management programs available, Walker ensures OE Fit, Form, and Function through rigorous R&D testing procedures. This expansion is already in TecDoc through the most recent update.
