

373- Exhaust Gas Temperature Sensors

Walker Products offers a full line of aftermarket EGTs, with 295 SKUs, and all being Euro 6 compliant. This provides the automotive aftermarket with the competitive program needed to service this technology trend, and combats premature failure caused by excess pollutants in the exhaust system as the vehicle ages. Where the sensitive element inside the EGTS is typically damaged easily by oil and soot deposits, Walker Products' new design features a higher degree of protection and longer service life.

For more details on the Walker Products 373- EGTS products, please contact saleseurope@walkerproduct.com

Cam & Crank Position Sensors

Walker Products offers an extensive cam and crank position sensor program, with 395 342 part numbers covering a wide range of European applications. This line follows Walker's strict quality standards to meet and exceed OE specifications. Realizing that cam and crank sensors are critical engine sensors, with common replacement rates from the factory, we capitalized on our ability to develop the most comprehensive and competitive program available to the aftermarket.

For more details on the Walker Products Cam and Crank Position Sensor program, please contact saleseurope@walkerproduct.com

Variable Valve Timing

The aftermarket has seen VVTs expand rapidly into one of the fastest growing categories in the industry. We recognize the growth in this segment with new vehicle technologies and their high failure rate from the factory. Walker Products' VVT program includes mechanical and electrical VVT sensors, VVT solenoids, and Cam Sprockets and Phasers – all that have been tested to meet and exceed OE specifications. This assists in increased service life and higher return on investment. Our current European offering includes 27 45 high demand part numbers.

Lambda Sensors

Walker Products has been delivering replacement Lambda Sensors to the UK and European market for over 22 years. Our reputation for unsurpassed quality comes from our commitment to develop a program that meets and exceeds OE quality in form, fit, and function. The Walker Products Lambda program has grown to over ~~1000~~ 1100 part numbers for the automotive market, and now branches into motorcycle and marine applications. The Walker Products Lambda sensors will continue to be the brand you trust for all of your replacement needs.
